Hi Doug,  
The number came from the Atlas of Pacific Salmon by Xanthippe Augerot. The numbers of fish in Bristol Bay come from ADFG reports for 2008.

I would return your calls if you left a phone number.

Phil,

As you may or may not know, there is a delegation of TU and TNC company (TNC science team) in Wash-DC. They have scheduled a meeting with NOAA Administrators in HQ.

As a result, I was tasked with compiling a 2 page briefing doc to forward to DC Admin stating the facts, what is the action, what's at stake, what has been our role, what is our anticipated role, etc...

A question was raised by Juneau Admin in the review of that doc. From a slide you gave me, attached, you state "43% of the world's Pacific salmon comes from Alaska".

Where did you get that figure?

Please respond ASAP...

Just tell me what doc it came from? I can find the doc...

Jon,

Here was my source as I received it.

I'm safely assuming, through multiple edits the language was simplified. It should say 43% of Worlds "Pacific" Salmon comes from Alaska.

Attached is the original graphic as I received it. It was provided to me through a joint effort of several state and federal agencies.

I can dig further for the source prior to this slide if Doug feels it necessary.
